

Mobile Leeb hardness tester SAUTER HN-D

"Pen type" Leeb hardness tester for mobile hardness testing of metals

Features

- User-friendly operation: The compact version enables the product to be used in a significantly wider range of applications compared with traditional devices
- · The measuring device has been designed for one-hand operation and this allows the user to work more quickly and flexibly
- · Modern LCD display: Optimised for industrial applications: increased luminosity and backlight can be switched on, that way the display can be read from any angle
- All measurement directions possible (360°) thanks to an automatic compensation function
- Internal impact sensor included (Type D)
- Measurement value display: Rockwell (B & C), Vickers (HV), Brinell (HB), Leeb (HL) Hardness comparison block not included
- · Internal data memory for up to 500 measurements with date and time
- Data interface USB, including USB interface cable
- 11 Delivered in a robust carrying case

Technical data

- Measurement uncertainty ± 4 HLD
- · Minimum sample weight on a solid and stable support: 2 kg
- · Minimum sample material thickness: 3 mm with coupling on fixed base
- Dimensions W×D×H 35×25×145 mm
- · Operation by rechargeable battery, standard, operating time without backlight 16 h, charging time 3 h
- · Mains adapter, external, standard
- Net weight approx. 0,07 kg

Accessories

- Plug-In for data transfer of measuring data from the measuring instrument and transfer to a PC, e.g. in Microsoft Excel®, SAUTER AFI-1.0
- 2 Test block Type D/DC, Ø 90 mm (± 1 mm), Net weight < 3 kg, hardness range 790 ± 40 HL, SAUTER AHMO D02 630 ± 40 HL, SAUTER AHMO D03 530 ± 40 HL, SAUTER AHMO D04
- · Factory calibration certificates for SAUTER AHMO D02, AHMO D03, AHMO D04, SAUTER 961-132

SAUTER CATALOGUE 2021

Pictograms

Adjusting program (CAL):

For quick setting of the instrument's accuracy. External adjusting weight required

Calibration block:

Standard for adjusting or correcting the measuring device

Peak hold function:

Capturing a peak value within a measuring process

Scan mode:

Continuous capture and display of measurements

Push and Pull:

The measuring device can capture tension and compression forces

Length measurement:

Captures the geometric dimensions of a test object or the movement during a test process

Focus function:

Increases the measuring accuracy of a device within a defined measuring range

Internal memory:

To save measurements in the device memory

Data interface RS-232:

Bidirectional, for connection of printer and PC

Profibus:

For transmitting data, e.g. between scales, measuring cells, controllers and peripheral devices over long distances. Suitable for safe, fast, fault-tolerant data transmission. Less susceptible to magnetic interference.

Profinet:

Enables efficient data exchange between decentralised peripheral devices (balances, measuring cells, measuring instruments etc.) and a control unit (controller). Especially advantageous when exchanging complex measured values, device, diagnostic and process information. Savings potential through shorter commissioning times and device integration possible

Data interface USB:

To connect the measuring instrument to a printer, PC or other peripheral devices

Bluetooth* data interface:

To transfer data from the balance/measuring instrument to a printer, PC or other peripherals

valves, etc.

Analogue interface:

Analog output:

4 mA - 20 mA) Statistics:

PC Software:

Printer:

WLAN data interface:

Data interface Infrared:

To connect relays, signal lamps,

To transfer data from the balance/measuring instrument to a printer, PC or other peripherals

To transfer data from the measuring instrument

to a printer, PC or other peripheral devices

Control outputs (optocoupler, digital I/O):

To connect a suitable peripheral device for

analogue processing of the measurements

For output of an electrical signal depending

Using the saved values, the device

calculates statistical data, such as

To transfer the measurement data

to print out the measurement data

from the device to a PC

Network interface:

to an Ethernet network

digital systems

Measuring units:

GLP/ISO record keeping:

average value, standard deviation etc.

A printer can be connected to the device

For connecting the scale/measuring instrument

It is a standardized interface command set for

KERN balances and other instruments, which

parameters and functions of the device. KERN

devices featuring KCP are thus easily integrated

with computers, industrial controllers and other

allows retrieving and controlling all relevant

Of measurement data with date, time and

serial number. Only with SAUTER printers

Weighing units can be switched to e.g.

non-metric at the touch of a key. Please

KERN Communication Protocol (KCP):

on the load (e.g. voltage 0 V - 10 V or current

Protection against dust and water

splashes IPxx:

The type of protection is shown in the pictogram.

Resets the display to "0"

Battery operation:

Ready for battery operation. The battery type is specified for each device

Rechargeable battery pack:

Rechargeable set

Mains adapter:

230V/50Hz in standard version for EU. On request GB, AUS or USA version available

Power supply:

Integrated, 230V/50Hz in EU. More standards e.g. GB, AUS or USA on request

Motorised drive:

The mechanical movement is carried out by a electric motor

Motorised drive:

The mechanical movement is carried out by a synchronous motor (stepper)

Fast-Move:

The total length of travel can be covered by a single lever movement

Verification possible:

The time required for verification is specified in the pictogram

DAkkS calibration possible:

The time required for DAkkS calibration is shown in days in the pictogram

Factory calibration: The time required for factory calibration is specified in the pictogram

Package shipment:

The time required for internal shipping preparations is shown in days in the pictogram

Pallet shipment:

The time required for internal shipping preparations is shown in days in the pictogram

PRINTER

refer to website for more details Measuring with tolerance range (limit-setting function):

Upper and lower limiting can be programmed individually. The process is supported by an audible or visual signal, see the relevant model
